

## Spreadsheet Directions

1. Start your spreadsheet software program.
2. Recreate the table from the previous page using your spreadsheet program.
3. Input a formula to calculate the following:
  - total number of males
  - total number of females
  - total number of people in each age category
  - total number of households
  - total number of people in each city
4. Perform the calculations, then save your work.
5. Print out a copy of your work if your teacher has instructed you to do so.
6. Answer the following questions.

### Interpreting Results

1. How many people live in each of the three cities?

---

---

---

2. Based on all the data, which is the largest age category?

---

---

### Drawing Conclusions

3. Some friends have told you that you should locate your toy store in the city with the largest population. Do you agree or disagree with this statement? Explain.

---

---

---

---

4. Based on the data presented, in which city would you choose to open your toy store?

---

---

---

---
