

# ACTIVITY 13-2

Name: \_\_\_\_\_ Date: \_\_\_\_\_

## Web Site Specifications

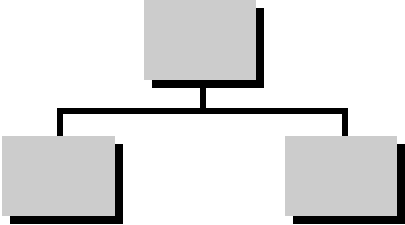

*Background:* To effectively create a Web site, you must develop a plan that includes all the information needed for the site, including a list of the graphics and the text that will be used. You must also plan the navigation for the site, including page links, using a flowchart. A flowchart visually depicts relationships between items.

**Boxes on the same level have equal importance. The user navigates in a linear fashion through the pages.**

```
graph LR; A[ ] --- B[ ]
```

**Boxes placed below show a subordinate role to the main box. The user can navigate by linking to either subordinate page from the main page.**

```
graph TD; A[ ] --- B[ ]; A --- C[ ]
```

*Directions:* Use the Web Site Specification Sheet to plan four additional pages for the Extreme Sports Rentals Web site that is provided on the *Introduction to Multimedia* Web site. On a separate sheet of paper, create a flowchart of the planned Web site.
