

**Academic Activity
Chapter 1**

**Everyday
Products**

Aerospace engineering is a specialized branch of mechanical engineering. In the push to develop specialized materials and systems for aircraft and spacecraft, many consumer products we use everyday were designed and created. Go online and conduct an Internet search of products developed by aerospace. List several items people commonly use in everyday life that were originally developed for use in the aerospace industry. For each item, specify its proposed use in aerospace and its common use in everyday life.

Item	Proposed Use in Aerospace	Common Use
