

## Academic Activity Chapter 15

# Seeking Out Summer Engineering Opportunities

Many universities and agencies offer summer engineering camps for students in grades 6-12. These programs are often taught by high-caliber educators and are designed to introduce students to math, science, engineering, and technology in a project-based or university environment.

Go online and research high school pre-engineering, science, and math camps.

1. Run a search for *high school engineering camp* or *Pre-engineering camp*. Find information for one that is closest to you or where you might be this summer. Record the name of the camp, the sponsoring university or entity, the dates, goals, and cost of the camp, and any available scholarships.
