

# **Assessment Checklist**

## **Chapter 8 Objectives**

Assessment Checklist	
Chapter 8 Objectives	
1.	<b>8.1</b> Use graphs of equations to find approximate solutions and then refine estimates.
2.	<b>8.1</b> Use calculator-generated tables to find approximate solutions and then refine estimates.
3.	
4.	
5.	
6.

**8.4** Understand the relationship between  $x$  and  $y$  in equations of the form  $xy = a$ , where  $a$  is a constant.

**8.4** Graph equations of the form  $xy = a$  or  $y = a/x$ , where  $a$  is a constant, to describe behavior of  $y$  when  $x$  gets close to 0 or far from 0.

**8.4** Understand the connection between inverse proportions and reciprocals.

**8.4** Understand the graphs of families of equations in the forms  $xy = a$ ,  $(x + b)y = 1$ , and  $(x - c)y = 1$ , where  $a$ ,  $b$ , and  $c$  are constants.

**8.5** Form conjectures about linear, quadratic, and reciprocal relationships, as well as relationships described by tables and rules.

**8.5** Understand what it means to prove that a conjecture is true.

**8.5** Analyze arguments to see whether they must always be true, using counterexamples when appropriate.
